Burnett Staffing Specialists Teams with Time Warner Telecom to Build a Fully Converged Communications Network

*-Time Warner Telecom's 4200 mile state-wide network key to VoIP deployment-
-Capabilities and customer focus streamlines VoIP installation-*

HOUSTON, Texas – August 6, 2007 - Time Warner Telecom Inc., (NASDAQ: TWTC), a leading provider of managed voice and data networking solutions for businesses, today announced the successful installation of a fully converged voice and data network for Burnett Staffing Specialists of Houston. These services include a 13-site ILAN (Integrated local area network) and a 100 Mbps connection between the company's data center and its disaster recovery site. Burnett Staffing Solutions provides a full line of staffing solutions supporting accounting, financial, administrative engineering, human resources, information technology and legal support throughout Texas.

“Our goal was to consolidate our communications network, improve network reliability and reduce costs with the deployment of a VoIP service,” said Scott Hoffman, IT director for Burnett Staffing Specialists in Houston. “The Time Warner Telecom team developed a reliable solution for us to do just that.” Burnett Staffing Specialists installed the integrated voice and data delivery solution in 13 locations across Houston, Austin, San Antonio, Dallas and El Paso, and a headquarters location.

This multi-city deployment of Time Warner Telecom's ILAN networking solution is one of the first to include the city of El Paso. El Paso became one of the company's newest markets with the completion of Xspedius Communication acquisition in late 2006.

“What really impressed me was that during planning and installation, the Time Warner Telecom team went well beyond everyone's expectations,” explained Hoffman. “They made themselves available to us throughout the process and took care of any issues that arose.” Extremely poor performance from the company's previous telecommunications vendor prompted Burnett Staffing to begin a search for a new provider. “We had huge issues with our former provider getting them to do anything for us,” added Hoffman.

-more-

“True to form, our former telecom provider cut service two hours before the agreed upon time,” recounted Hoffman. “I called our Time Warner Telecom rep and instead of being down for two hours, he was able to get us ported over and in operation in 10 minutes. That was a great start to our relationship and we’ve been satisfied ever since.”

In addition to Burnett Staffing Specialists VoIP deployment, the company contracted for a 100 Mbps connections in support of its business continuity and disaster recovery initiatives. Due to this capability the Burnett Staffing now operates a capability where all data in its main data facility is simultaneously mirrored on servers in its BC/DR site, thus ensuring seamless access to data in the event of a power failure or other such disaster.,

“We’ve known for a long time that to be successful in this industry, not only takes having the best available technologies, but it really is important to work closely with the customer to understand their needs,” said Darin Cook, vice president and general manager for Time Warner Telecom in Houston. “Time Warner Telecom offers communications technologies, solutions and a 10 Gbps nationwide network, providing companies the ability to improve their communications capabilities while significantly reducing costs. Our solutions enabled Burnett Staffing Solutions to deploy their VoIP solution and fortify their entire communications network.”
