Piedmont Hematology-Oncology Gains Instant, Secure Access to Patient Records with Time Warner Telecom's IP VPN Service

-Network solution links 8 cancer treatment sites; replaces antiquated Frame Relay-service-

GREENSBORO, NC.—February 6, 2007—Time Warner Telecom Inc. (NASDAQ: TWTC), a leading provider of managed voice and data networking solutions for businesses, today announced the successful deployment of IP VPN and Ethernet Internet services (EIS) for Piedmont Hematology and Oncology Associates in Winston-Salem. Piedmont Hematology-Oncology is a provider of diagnostics and treatment for blood and cancer patients.

“This deployment of IP VPN is vital to our goal of serving patients quickly and efficiently,” said Sy King, Director of Information Technologies for Piedmont Hematology. “With this IP VPN service we now have stable connections between all our eight locations. This secure connectivity from Time Warner Telecom enables us to deliver electronic medical records (EMR) to physicians instantly. In the past, it could take staff sometimes up to 2 hours to locate and deliver a patient’s paper medical record to the doctor. Many times these medical records, which can be very large, needed to be physically transported to our other locations, now these same records are available when and where they are needed.”

Piedmont Hematology’s lab draws and analyzes blood samples from patients and sends the results to physicians at one of its eight clinics or hospital locations. As a result of this new Time Warner Telecom service, patient diagnosis can take place within hours rather than days. “With this deployment of IP VPN from Time Warner Telecom, we now have an incredible network that serves our connectivity needs across North Carolina,” said King. “The service we received from our previous provider was disappointing. This solution is robust, flexible and Time Warner Telecom is much easier to work with.”

Additionally, Piedmont Hematology-Oncology purchased Ethernet Internet services from Time Warner Telecom to support its headquarters, clinic and hospital locations. The company will also support its business continuity and disaster recovery efforts by mirroring its critical data at a backup data center location.

“Every day healthcare providers come to us seeking solutions they can deploy to improve patient care and achieve their business goals,” said Travis Noble, general manager for Time Warner Telecom in Greensboro. “Time Warner Telecom delivers solutions such as IP VPN so the delivery of good medical care to North Carolinians does not hinge on how their providers network is working any given day”
