**University of Kentucky Scales Connectivity for
Students, Faculty and Administration with Time Warner
Telecom's Networking Capability**

*-Gigabit Ethernet-based Internet supports communications goals both on and off campus
- Capability provides school diversity and network resiliency*

LOUISVILLE, Ky. — November 28, 2007—Time Warner Telecom Inc., (NASDAQ: TWTC), a leading provider of managed voice and data networking solutions, today announced the successful installation of its Ethernet Internet Service (EIS) to the University of Kentucky in Lexington.

“The added capability we get from Time Warner Telecom’s Ethernet Internet solution will support the ongoing educational, healthcare and research goals of the University,” said Doyle Friskney, associate vice president of Information Technology & CTO at the University of Kentucky. “As the state's largest land grant university, we play an integral part in the state by supporting not only our campus and hospital locations, but by supporting the clinics affiliated with the hospital as well as state agricultural extension facilities.”

Time Warner Telecom is one of the country’s premiere providers of networking solutions to businesses, government and education. Since announcing its participation in The Quilt last year, the company has brought multiple gigabits of Internet connectivity to more than a dozen colleges and universities across the country. Higher Education institutions deploy Ethernet-based solutions from Time Warner Telecom to streamline the way they connect users on and off campus at greatly increased speeds. These solutions are easily scalable to meet ever increasing bandwidth requirements.

“We are pleased to deliver our premiere networking capabilities in support of the University’s mission,” said Joe Paulin, vice president and general manager Time Warner Telecom in Louisville. “The students, faculty and administration will all benefit from this deployment with the increased speed and flexibility this service provides customers. The Ethernet connections at the school will support collaboration in teaching, research and healthcare.”

About Time Warner Telecom

Time Warner Telecom Inc., headquartered in Littleton, Colo., provides managed network services, specializing in Ethernet and transport data networking, Internet access, local and long distance voice, VoIP and security, to enterprise organizations and communications services companies throughout the U.S. As a leading provider of integrated and converged network solutions, Time Warner Telecom delivers customers overall economic value, quality, service, and improved business productivity.
