Vertical Systems Group Ranks Time Warner Telecom Among Top 3 Providers of U.S. Ethernet Ports

*-Company sees continued high demand for Ethernet services
- Company narrows gap to #1 market share position*

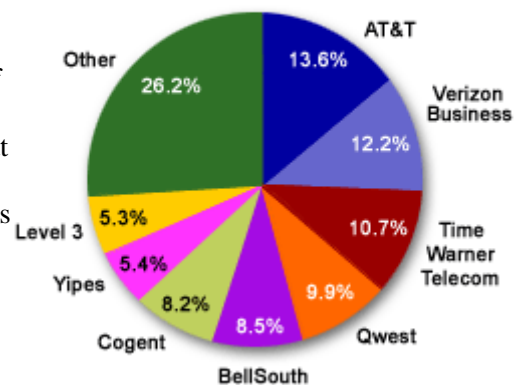

LITTLETON, Colo.—Feb. 5, 2007—Time Warner Telecom Inc., (NASDAQ: TWTC), a leading provider of managed voice and data networking solutions for businesses, today announced that Vertical Systems Group has ranked it among the nation’s top three providers of metro and national Ethernet connectivity for businesses. Vertical Systems Group provides in-depth, accurate, defensible statistics and analysis on networking markets with a focus on Ethernet services, IP VPNs, Frame Relay, Private Lines, ATM, DSL, MPLS, VPLS, and Internet Access.

“We are very pleased with this ranking, as it proves we continue to take market share from the incumbents with our broad and flexible product portfolio,” said Mike Rouleau, Senior Vice President, Strategy and Business Development for Time Warner Telecom. “In 2003, as one of the first providers to offer a robust suite of Ethernet-based services in metropolitan areas, we recognized the versatility of the technology to deliver what customers needed for advanced communications capabilities. Since then, we have continued to add services that capitalize on these capabilities and offer users the ability to seamlessly converge their voice, data and Internet networks.”

“Time Warner Telecom continues to demonstrate its leadership in delivering metro Ethernet by maintaining its market share versus other competitors,” said Erin Dunne, Director of Research Services for Vertical Systems Group.

Time Warner Telecom closed the gap between AT&T by 2.7 market share percentage points, and between Verizon by 1.3 market share percentage points in the last six months. The company’s Ethernet port market share maintained consistency at over 10.7% during the same time period. The year-end 2006 U.S. Ethernet port share totals are calculated using the installed base of actual U.S. Business Ethernet installations as of December 31, 2006.

Time Warner Telecom's metro Ethernet services are available in speeds from 2 Mbps to 10 Gbps, with national connectivity at speeds up to 1 Gbps. The company sells its Ethernet-based offerings to medium and large enterprise customers that require sophisticated and versatile high-bandwidth connections. Enterprise businesses that benefit from Ethernet connectivity are medical providers, financial institutions, military and government and education. Time Warner Telecom offers its Ethernet-based solutions to customers in 75 metropolitan markets across the U.S. and the District of Columbia as well as extending that coverage between markets with its more than 21,000 fiber-mile network and IP backbone.
