tw telecom Launches July 1, 2008

- Time Warner Telecom becomes **tw telecom***
- New offer helps customers cut connectivity costs in half*
- Focuses brand on customer experience, innovative network solutions*

LITTLETON, Colo. – June 26, 2008 – **tw telecom inc.** (NASDAQ: TWTC), a leading provider of managed voice, Internet and data networking solutions for businesses locally and across the country, launches July 1, 2008. Formerly Time Warner Telecom, the new name and brand reflects the company’s continued focus on delivering an exceptional customer experience, product innovation, and performance to help customers better manage costs to win in today’s marketplace.

“**tw telecom** is familiar; it is stable; it is consistent; it is clear, concise and focused – it is who we are,” said Larissa Herda, **tw telecom** Chairman, CEO and President.

“We have built a company that is unmatched in delivering a powerful combination of nation-wide network assets, innovative solutions, success-based growth strategies, strong financials and a focus on the customer. We leverage these strengths to benefit each one of our customers and to grow long-term shareholder value,” Herda added.

As part of the new brand name launch, **tw telecom** is offering new customers the opportunity to slash their connectivity costs in half, according to Bob Meldrum, vice president of Corporate Communications for **tw telecom**. “A unique on-line and print advertising campaign drives readers to a landing page with information about this limited time offer as well as a metro Ethernet whitepaper written by leading industry analyst firm Vertical Systems Group,” Meldrum said.

“**tw telecom** has more commercial buildings directly connected to a fiber infrastructure than any other U.S. competitive telecom services provider,” Meldrum said.

“This gives us the ability to quickly and seamlessly deliver Ethernet and other next generation services to businesses that require more efficient network connectivity,” Herda said. “This strategy has translated into double-digit growth rates for us over the past several years.”

As Time Warner Telecom, the company reported 2007 revenue of \$1.084 billion and modified EBITDA of \$339 million. The company reported \$282.6 million in first quarter revenue while employing 2,883, as of Mar. 31, 2008.

tw telecom delivers high-speed, high-capacity communications services at up to 10 Gbps to businesses, organizations, government entities, and carriers over its own national fiber infrastructure and IP backbone. **tw telecom** has offices in 75 U.S. metropolitan areas, 30 states and the District of Columbia, and delivers business networking services across the country.
