**ENETsolutions Selects tw telecom to Power
New State-of-the-Art ‘Solution Center’**

- **tw telecom** to provide advanced fiber and voice services to ENETsolutions
- Facility that combines a data center with a Network Operations Center

HOUSTON – October 13, 2009 – **tw telecom** (NASDAQ: TWTC), a leading provider of managed voice, Internet and data networking solutions for businesses, today announced that ENETsolutions has selected it to provide voice and data services to the company’s new ‘Solution Center’ facility in Houston. As part of its multi-year agreement with ENET, **tw telecom** will provide dual-entry fiber, as well as a combination of Internet access, local and long distance voice services, DS3s, DS1s and Ethernet long haul solutions.

ENETsolutions is a Houston-based, full-service technology firm that has recommended **tw telecom** as its “preferred provider” to clients for more than five years. As it expands to offer data center and network operations center services, ENET is utilizing **tw telecom**’s highly reliable and affordable services in its own facilities.

“We have nearly a decade of experience working closely with **tw telecom**, and we have been impressed with the quality, reliability and affordability of their services,” said Faisal Bhutto, vice president of Operations at ENETsolutions. “When we needed advanced data and voice services to power our innovative ‘Solution Center,’ we went with the same company we recommend to our customers: **tw telecom**.”

“ENETsolutions has succeeded by meeting the unique and often-demanding needs of its customers,” said Darin Cook, vice president and general manager for **tw telecom** in Houston. “That success has allowed ENET to greatly expand the services it now offers customers, and we are pleased that **tw telecom** services are enabling that expansion.”

tw telecom connects more commercial buildings to its fiber network than any other competitive communications provider, only exceeded by the large global incumbents. In fact, it has the third highest market share of retail Ethernet ports in service. With its own national fiber network and IP backbone, **tw telecom** has the national capability, robust product portfolio and national/local customer care teams to support mission critical enterprise applications and to deliver the industry’s most sought after customer experience.
